

Social Story: Radio Aids

.....

Notes for adults

What's a social story?

A social story explains a concept, situation or skill in an accessible way.

It's a written narrative that can help the reader prepare for a new situation or safely explore a new concept.

Social stories were originally designed for children with autism but they can be helpful for lots of children, including those with special educational needs and younger children.

How do I use this resource?

This social story is designed to help your child feel more comfortable using their radio aid at home, at extra-curricular clubs and at school or nursery. It may be helpful if your child is new to using a radio aid, will be using it in a new way, or if they are reluctant to use one.

You can adapt this resource to suit your child. Select the sections and parts that are most relevant to them. On some pages, you can add extra information or select an option to make it personal to them.

You can help your child fill in the information on the orange lines. The blue text shows where you have different options to suit your child – delete as appropriate.

Me and my radio aid

My name is _____.

I am _____ years old.
